THERMA DRIP

ThermaDrip is a low-profile ice melt system for new construction and roof replacements. It uses patented technology to create a warm drip edge on the eaves of metal roofs. The panel is installed between the ice and water shield and the new metal roof, with a run of protected heat cable protruding less than an inch. ThermaDrip provides a highly efficient 10" melt back zone from the roof edge.

RISK REDUCTION

ThermaLine defends against structural damage as well as slip and fall hazards.

ENERGY EFFICIENT

Replacing heat tape with ThermaLine can generate savings of up to 65%.

DURABILITY

ThermaLine cable is protected by the panel, decreasing expected maintenance to just once every 10 years.

CURB APPEAL:

Our panels are an attractive addition to your property and are offered in a variety of designs and colors.

SAFETY:

Patented technology, UL listed and compliant with NEC Article 426 requirements.

SPECIFICATIONS

Material Selection

24 gauge steel or 021" copper

Dimensions

ThermaDrip is available in 5' lengths and can be trimmed onsite.

Heating System

Commercial grade self-regulating heat cable, UL-approved for roof and gutter de-icing. Available in 240 or 120 volt and 6, 8, 10 or 12 watts.

Components

ThermaDrip panels, heat cable, and commercial grade adhesive.

Electrical Requirements

120VAC or 208-277VAC. NEC Article 426.28 requires 30mA ground fault circuit protection for roof ice melt systems.
