# THERMAFLAT

Stop flat and low-slope ice dams.

Every winter, commercial property owners across the United States are faced with the risk of property damage and physical injury due to the near impossible task of stopping large icicles and ice dams on flat roofs.

ThermaFlat was designed to solve this icy challenge. These panels are made-to-order and tailored to the design and material of the flat or low slope roof (TPO, EDPM, etc).

## RISK REDUCTION

ThermaLine defends against structural damage as well as slip and fall hazards.

## ENERGY EFFICIENT

Replacing heat tape with ThermaLine can generate savings of up to 65%.

## DURABILITY

ThermaLine cable is protected by the panel, decreasing expected maintenance to just once every 10 years.

## CURB APPEAL:

Our panels are an attractive addition to your property and are offered in a variety of designs and colors.

## SAFETY:

Patented technology, UL listed and compliant with NEC Article 426 requirements.
