# THERMA VALLEY +

ThermaValley+ ice melt panels use patented technology to stop ice dams in the valleys of your new roof by creating and maintaining a clean melt path for snow and ice. The two sided valley panel secures a double run of UL-listed self regulating heat trace cable in place for highly efficient, direct heat transfer.

ThermaValley+ is compatible with all roof materials and is installed directly onto the ice and water shield with an adhesive. This avoids any penetration to the roof deck. This is paired with ThermaShingle+ on the eaves to stop ice damming and clear snowmelt from the roof.

## RISK REDUCTION

ThermaLine defends against structural damage as well as slip and fall hazards.

## ENERGY EFFICIENT

Replacing heat tape with ThermaLine can generate savings of up to 65%.

## DURABILITY

ThermaLine cable is protected by the panel, decreasing expected maintenance to just once every 10 years.

## CURB APPEAL:

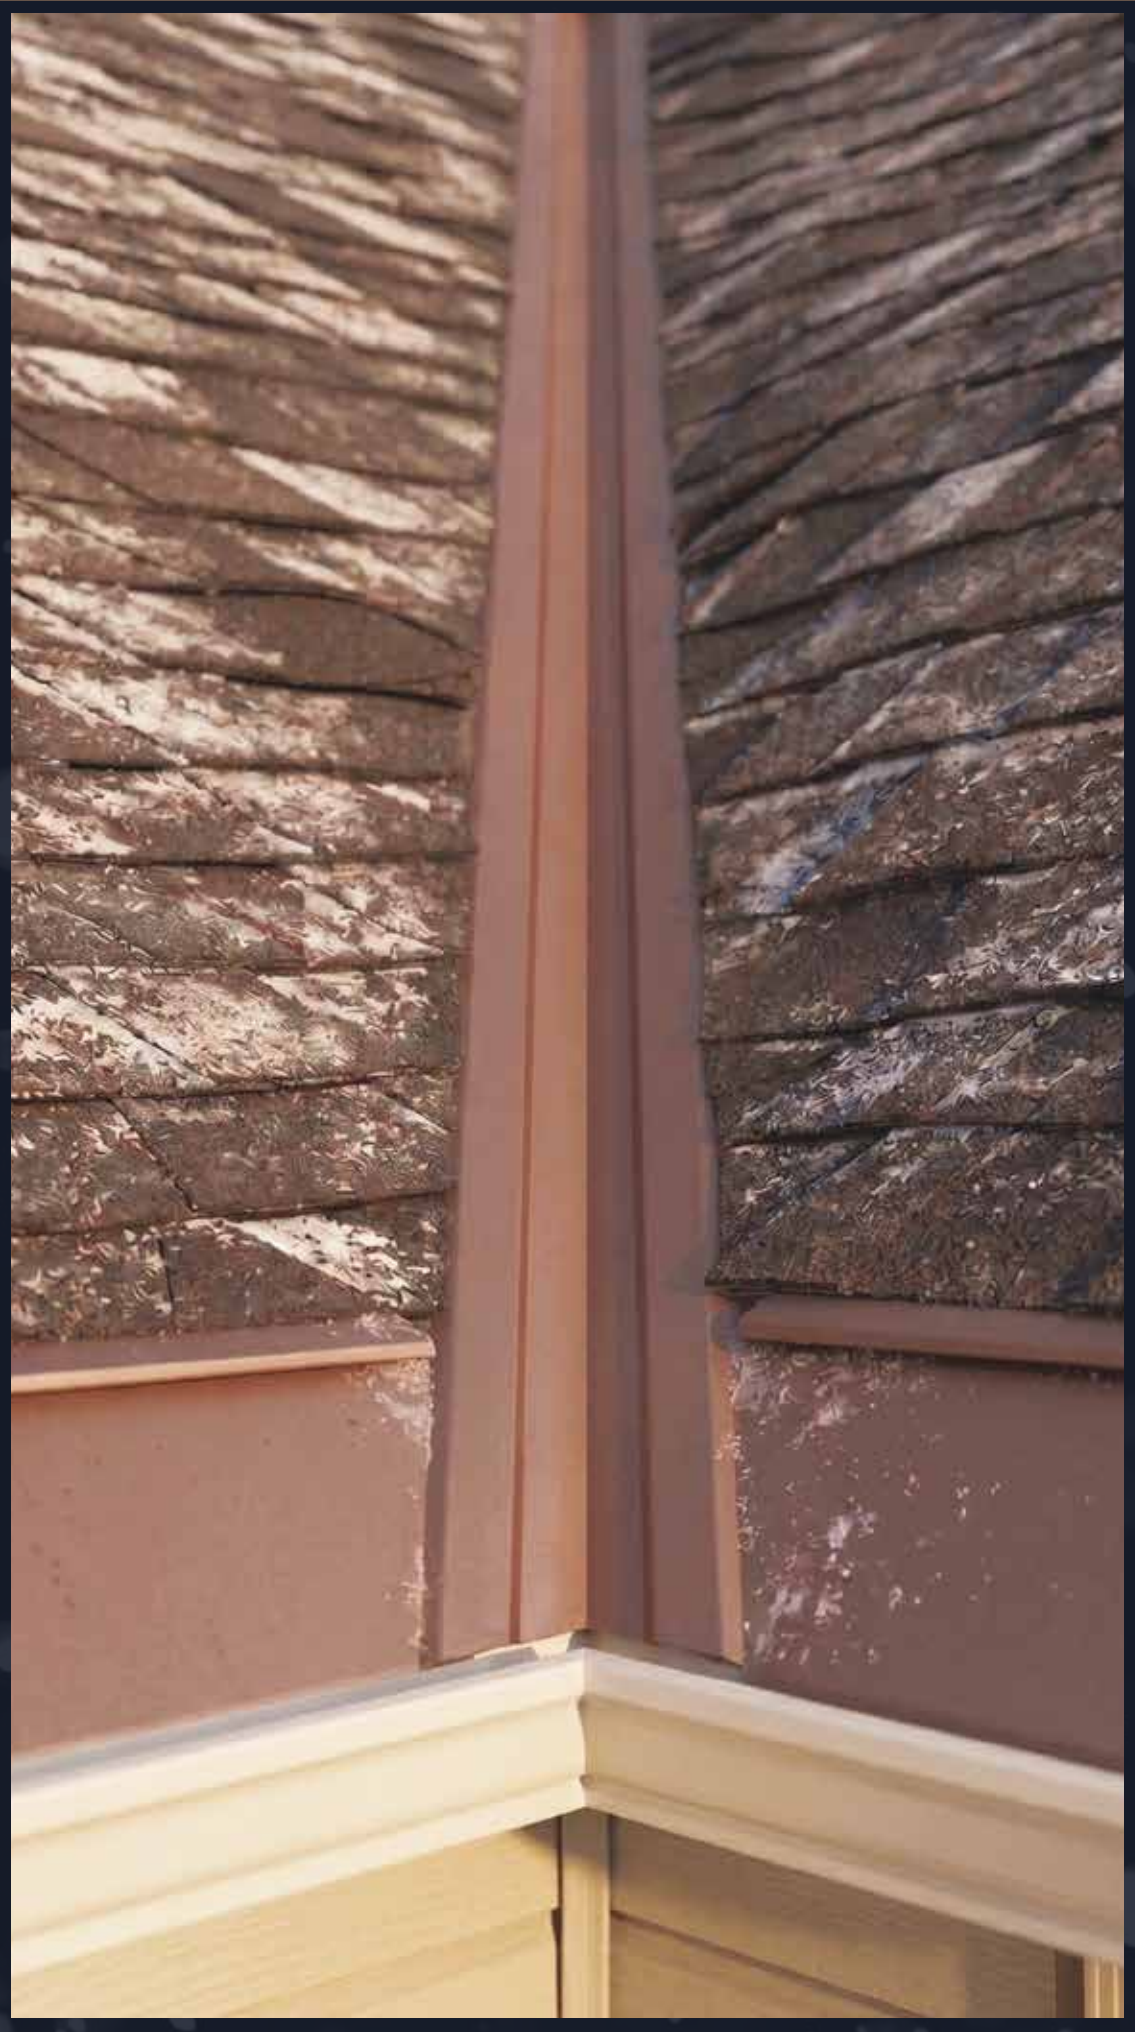

Our panels are an attractive addition to your property and are offered in a variety of designs and colors.

## SAFETY:

Patented technology, UL listed and compliant with NEC Article 426 requirements.

## SPECIFICATIONS

### Material Selection

.032 aluminum, 24 gauge steel or .021" copper

### Dimensions

ThermaValley+ is available in 5' lengths and can be trimmed onsite. Panel thickness is 18" unless requested otherwise. Pitch is required at time of order.

### Heating System

Commercial grade self-regulating heat cable, UL-approved for roof and gutter de-icing. Available in 240 or 120 volt and 6, 8, 10 or 12 watts.

### Components

ThermaValley+ panels, heat cable, and commercial grade adhesive.

### Electrical Requirements

120VAC or 208-277VAC. NEC Article 426.28 requires 30mA ground fault circuit protection for roof ice melt systems.

## COMPLETE YOUR SYSTEM:

**THERMASHINGLE+**

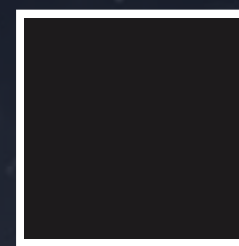

**THERMAGUTTER**
